Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet
-- but bad policies allow companies like AT&T and Verizon to
shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the
700MHz spectrum auction to create an open network that gives
consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive
wholesale marketplace.
3. The freedom to access any content or services we want through
our devices.

Sincerely,

Maurice Wilson

tonymartin314@yahoo.com wrote on 7/20/2007 12:52:02 PM :

Dear Commissioners etc.,

I have read of recent efforts by Google to have the upcoming auction of the 700 MHZ bands require full open access, to an even greater degree than suggested by Mr. Martin.

I support that view.

Why?

The US Government DOES make a lot of money in auctioning off the spectrum. The existing wireless companies are implying you will lose out by requiring Open Access.

However, you will ALSO make money at the Federal Level from taxes on all the companies that end up offering SERVICES using that spectrum.

I think the income you will make from increasing THAT industry will FAR eclipse the dollar amount for the Sale.

In addition, that other "new" tax money will come in year after year. Just like the Internet created hordes of new industry, not envisioned with its inception, so to will Open Access open the door to new ideas.

I for one hate our US system of Cell Phones, and think the European paradigm is much more effective, and once you open the door to innovation, and let anyone work with the spectrum, so many additional profit options can develop.

I am a rocket scientist/engineer for Ball Aerospace, not associated with any wireless company, and am emailing you as a consumer.

Please do as Google is pressing you to do and require open access. WE can't even predict now what might happen, only that things CAN happen (business wise) with open access vs. closed. Think of GPS! Lots of companies using that in ways not envisioned. Time to change the game.

The money made at the auction should be only ONE of the dollar inputs you should be using to evaluate this option for total cash return.

Tony Martin
Erie, CO

(if you reply to this email, be warned my remailer mangles the addresses if there are multiple recipients, so you have to reenter them usually)

Commissioner Deborah Taylor Tate

Dear Commissioner Tate,

I know the official comment period has closed, but this is important enough for me to appeal to you directly. The airwaves belong to the public, not corporations like Verizon and AT&T whose anti-competitive practices have resulted in the U.S. falling to 16th in the world in high-speed Internet rankings.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

Sincerely,
Linda Eby

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

Sincerely,

Gerald Kelly
